Greenwood Village, Colorado 80111

RE: Plainwell Mill, Operable Unit #7, Allied Paper/Portage Creek/Kalamazoo River Site
Plainwell Mill Banks Emergency Action

Dear Ms. Hale:

This is in response to Weyerhaeuser Company's (Weyerhaeuser) proposed transport and disposal plan for the materials dredged during the emergency action from the banks and floodplains of the Kalamazoo River adjacent to the Plainwell Mill (Mill Banks). The Mill Banks contain polychlorinated biphenyl (PCB) contaminated materials that exceed allowable PCB levels under Federal and Michigan law.

The United States Environmental Protection Agency (EPA) has determined that Weyerhaeuser's plan to transport and dispose materials containing less than 50 ppm PCBs, based on historical in-situ sampling, in a licensed and permitted solid waste landfill does not present an unreasonable risk to human health and the environment. Pursuant to 40 C.F.R. § 761.61 (c), and subject to applicable state and local law, EPA hereby approves the transport and disposal plan proposed in the April 16, 2008, letter from Weyerhaeuser to EPA, attached hereto as Attachment 1.

Should you have any questions on this matter, please contact Sam Chummar of my staff at (312) 886-1434.

Sincerely,

A handwritten signature in black ink that reads "Richard C. Karl".

Subject: Disposal Information
Plainwell Mill Emergency Action
Allied Paper, Inc./Portage Creek/Kalamazoo River Site

Dear Mr. Chummar:

The approved Plainwell Mill Banks Emergency Action Design Report identified material handling, general transportation, and overall disposal plans for the removed residual material. Some of the details regarding sampling protocols, disposal facilities, and scheduling was not available at the time of the final report. This letter provides additional information regarding a number of those issues.

A total of approximately 3,000 to 4,000 cubic yards of paper residuals were removed from the Plainwell Mill banks from November 2007 through March 2008 as part of the Emergency Action. These materials are currently stored on site within the LLDPE-lined containment pad and two HDPE-lined roll off boxes (approximately 50 cubic yards) located at the center of the Plainwell Mill property. As is, the material has a moisture content of 25 to 35 percent which limits transport and landfill disposal acceptance and will require solidification prior to transport.

Material Characterization and Solidification

The material has been sampled, as described below, to ensure proper disposal.

1. The containment pad is separated into four quadrants. Each of the quadrants was sampled for total PCBs prior to the addition of the stabilizing agent (PAD 1A, 1B, 2A, 2B). The results indicated total PCB concentrations of 3.24 mg/kg, 3.2 mg/kg, 3.38 mg/kg, and 2.56 mg/kg.
2. Mintek Calciment bottom ash was used as the solidifying agent. A Material Safety Data Sheet is attached. The Calciment material was brought on site in small quantities (one to two trucks daily) and placed within the containment pad immediately adjacent to the waste material. The Calciment was then mixed into the residual material using a backhoe.
3. Air monitoring was conducted during offloading and mixing of the Calciment material according to the Site Health and Safety Plan. Preliminary air monitoring results from the personal data RAM indicate that the maximum short term exposure limit (15 minute average) observed was ~1 mg/m³. This value is significantly lower than the OSHA 8-Hour Time Weighted Average threshold value of 15 mg/m³.

Mr. Sam Chummar, Remedial Project Manager
U.S. Environmental Protection Agency - Region 5
April 16, 2008
Page 2

4. After addition of solidifying agent, two samples were collected for waste characterization¹ (PAD-1 and PAD-2). Waste Management Westside RDF requires analysis of the following prior to accepting the material: paint filter, SVOCs, VOCs, RCRA Metals, pesticides and herbicides, and PCBs. Results will be submitted to the USEPA upon receipt.
5. Both segregated dumpsters have been analyzed for PCBs. RB-East (3.21 mg/kg) is the material segregated from the central portion of Zone C. RB-West (0.62 mg/kg) is the material segregated from the east end of Zone D. Results of the samples are attached. Based on the results, disposal options for this material will be reviewed and approved by the USEPA RPM.

Loading and Transportation

To minimize dust generation, a temporary gravel haul road has been constructed adjacent to the south side of the containment pad (see Figure 1). The temporary road will provide improved access for loading the trucks adjacent to the containment pad. Once trucks are loaded, they will proceed to a spray wash area prior to exiting the site. The spray wash area will be lined with HDPE and sloped to collect the spray wash water into a sump. Trucks will be sprayed with a pressure washer to remove any materials that may have collected on the outside during loading operations. The water in the sump will then be pumped to a temporary holding tank. Once the temporary holding tank has been filled, the sump water will be treated in combination with the dewatering liquids and rain water through the on-site water treatment system, volumes will be well within design capacity of the system.

A properly licensed hauler will be utilized for transport of materials using HDPE-lined trucks with bed covers. It is anticipated that 15 to 20 trucks per day will be loaded and sent to the disposal facility. The trucks will enter the property off of the newly constructed haul road across from Prince Street and exit the site on Cedar Street. The City of Plainwell has been contacted regarding the truck traffic. Based on the estimated amount of material in the pad, 6 to 8 working days of truck disposal is expected at this time. Transportation of the segregated material may require additional licensing requirements for the transporter which will be addressed once the disposal option is chosen for that material.

Disposal

Two facilities have been designated to accept the waste material from the site. Materials located within the containment pad (Approximately 3,000 – 4,000 cubic yards) will be transported to:

Waste Management Westside RDF
14094 M-60 West
Three Rivers, MI 49093

¹ A separate waste characterization sample was collected on January 3, 2008, and analyzed. The results for that characterization sample have been provided to the USEPA and are included as Attachment 3.

Mr. Sam Chummar, Remedial Project Manager
U.S. Environmental Protection Agency - Region 5
April 16, 2008
Page 3

Solid waste disposal area operating license: 9026

For material presently within the dumpsters, if necessary, will be transported to:

The Environmental Quality Company - Wayne Disposal, Inc. Site #2 Landfill
49350 N I-94 Service Drive
Belleville, MI 4811
USEPA ID #MID048 090 633

Proposed driving routes which have been reviewed with the trucking firms to each site are included as Attachment 2. The proposed route will be review with the City of Plainwell and any adjustments made upon their request.

Site Cleanup

Overall site cleanup includes removal of access roads (if necessary), disposal of the containment pad liner, and demobilizing equipment and materials. The surface of the temporary access roads used to access the banks during the removal efforts of bank residuals was scraped to a depth of 6 to 12 inches to remove any potential material that may have dropped from the equipment or trucks during transport of the waste material to the containment pad and will be disposed off site with the residual material.. The temporary roads used for trucking the material off site will be inspected and a decision made with input from the USEPA, MDEQ, and City of Plainwell regarding whether the roads need to be removed and roadbed material transported off site.

Please contact Jim Hutchens with RMT or myself if you have any questions on this letter. Thank you for your past feedback and we look forward to moving forward on proceeding with off -site disposal of the residual material. Upon your approval, we will provide you a confirmed schedule for this work.

Sincerely,
Weyerhaeuser Company

Jennifer Hale
Environmental Manager

SECTION 2. TYPICAL COMPOSITION

Component	Formula	% Wt.	CAS No.	PEL
Calcium Oxide	CaO	50 - 55	1305-78-8	5mg/m ³
Amorphous Silica	SiO	2 - 3	7631-86-9	80mg/m ³
Aluminum Oxide	Al ₂ O ₃	0.1 - 0.2	1344-28-1	15mg/m ³
Ferric Oxide	Fe ₂ O ₃	0.5 - 1	1309-37-1	10mg/m ³
Magnesium Oxide	MgO	2 - 4	1309-48-4	15mg/m ³
Calcium Sulfate	SO ₃	35 - 38	7778-18-9	15mg/m ³

SECTION 3. HAZARD IDENTIFICATION

Potential Health Effects:

Inhalation (acute): Breathing dust may cause nose, throat or lung irritation and choking. The described effect depends on the degree of exposure and preexisting respiratory conditions.

Inhalation (chronic): Prolonged or repeated exposure may cause inflammation of the respiratory passages. May cause chemical bronchitis with coughing and difficulty breathing. Risk of injury depends on duration and level of exposure. Long term exposures which result in bronchitis may result in additional health effects.

Eye Contact (acute/chronic): Initially may cause eye irritation with discomfort, tearing or blurring of vision. Continued overexposure could potentially cause burns and damage to cornea.

Skin Contact (acute/chronic): Initially may cause dry skin, redness, discomfort or irritation. Continued overexposure could potentially cause burns.

Ingestion (acute/chronic): Causes gastrointestinal tract irritation. May cause nausea vomiting and diarrhea. May cause central nervous system depression.

SECTION 4. FIRST AID MEASURES

Skin: Wash with soap and water. Seek medical attention if irritation develops or persists.

Eyes: Flush eyes with clean, low-pressure water for at least 15 minutes, occasionally lifting eyelids. Seek medical attention for abrasions.

Inhalation: Remove personnel from contaminated area to fresh air. If not breathing, give artificial respiration. If breathing is difficult, give oxygen. Obtain medical attention for discomfort.

Ingestion: If ingested, do not induce vomiting, but drink plenty of water. Seek medical attention for discomfort.

SECTION 5. FIRE FIGHTING MEASURES

Flashpoint and Method: None.

Flammable Limits: Not combustible.

Autoignition Temperature: None.

General Hazard: Avoid breathing dust. Although this product is not considered flammable it has the potential to generate heat when exposed to water.

Firefighting Instructions: Treat adjacent material.

Firefighting Equipment: This product is not a fire hazard. Self contained breathing apparatus is recommended if this material is exposed to heat since there is a possibility that toxic fumes may evolve.

Hazardous Combustion Products: None.

SECTION 6. ACCIDENT RELEASE MEASURES

General: Ventilate area of leak or spill. Keep unnecessary and unprotected people away from area of spill. Wear appropriate personal protective equipment as specified in section 8. Collect and place in a suitable container for reclamation or disposal, using a method that does not generate dust.

SECTION 7. HANDLING AND STORAGE

Handling: Wash thoroughly after handling. Remove contaminated clothing and wash before reuse. Avoid contact with eyes, skin and clothing. Do not ingest or inhale.

Storage: Store in a well-ventilated area away from incompatible substances.

Storage Temperature: Unlimited.

Storage Pressure: Unlimited.

Empty Containers: Dispose of containers in an approved landfill or incinerator.

SECTION 8. PHYSICAL AND CHEMICAL PROPERTIES

Color:	Varying from light to dark gray/white mix of fine granules and powder
Boiling Point:	Not determined
Freezing Point:	None, solid
Viscosity:	None, solid
Vapor Pressure:	Not applicable
Vapor Density:	Not applicable
Specific Gravity:	Not determined
Solubility in Water:	Not determined
Evaporation Rate:	Not measurable
pH (in water):	Not determined

SECTION 9. STABILITY AND REACTIVITY

General: Product is stable but should be kept dry. It may react exothermically to produce heat when in contact with water.

Incompatible Materials and Conditions to Avoid: May generate heat when exposed to water. Will neutralize mineral acids producing calcium and magnesium based salts. Will absorb carbon dioxide in air. Avoid conditions that generate dusts.

Hazardous Polymerization: Will not occur.

SECTION 10. TOXICOLOGICAL INFORMATION

LD50/LC50: No information available.

Carcinogenicity: Not listed by ACGIH, IARC, NOISH, NTP or OSHA

Epidemiology: No information available.

Teratogenicity: No information available

SECTION 11. ECOLOGICAL INFORMATION

Not available.

SECTION 12. DISPOSAL CONSIDERATIONS

Dispose in landfill in accordance with all applicable regulations. Any disposal practice must be in compliance with local, provincial, state and federal laws and regulations. Contact local environmental agency for specific rules.

SECTION 13. TRANSPORTATION INFORMATION

Since the mixture varies by percentages of the different components to the point of being present or absent, it is difficult to evaluate bed ash based on DOT classifications.

SECTION 14. REGULATORY INFORMATION

Toxic Substance Control Act (TSCA)

Calcium Oxide (CAS# 1305-78-8) is listed on the TSCA inventory

None of the chemicals in this material are listed under TSCA Section 12b

None of the chemicals in this product have a SNUR under TSCA

None of the chemicals are on the Health and Safety reporting list

None of the chemicals in this product are under a Chemical Test Rule

SARA

Section 302: None of the chemicals in this material have a RQ (reportable quantity)

Section 302: None of the chemicals in this material have a TPQ (threshold planning quantity)

SARA Codes: Acute, Reactive

Section 313: No chemicals are reportable under Section 313

Clean Air Act

This material does not contain any hazardous air pollutants. No Class 1 or Class 2 Ozone depleters present.

Clean Water Act

CWA Hazardous Substances: none

CWA Priority Pollutants: None

CWA Toxic Pollutants: None

OSHA Hazard Communication Rule, 29 CFR 1910.1200:

One or more of the constituents identified are considered by OSHA to be hazardous.

STATE Right-to-Know

Calcium Oxide (CAS# 1305-78-8 is listed on the following state Right-to-Know lists: California, New Jersey, Florida, Pennsylvania, Minnesota, Massachusetts

Calcium Sulfate (CAS #7778-18-9) is listed on the following state Right-to-Know lists: Pennsylvania

CERCLA/SUPERFUND, 40 CFR 117.302:

Not listed.

WHMIS Information:

This product has a WHMIS classification of E, C

PROJECT NARRATIVE

Project: 5130.04 PLAINWELL MILL BANKS

Pace Project No.: 402162

Method: EPA 8082

Description: 8082 GCS PCB

Client: RMT MADISON

Date: April 11, 2008

General Information:

2 samples were analyzed for EPA 8082. All samples were received in acceptable condition with any exceptions noted below.

Hold Time:

The samples were analyzed within the method required hold times with any exceptions noted below.

Sample Preparation:

The samples were prepared in accordance with EPA 3541 with any exceptions noted below.

Initial Calibrations (including MS Tune as applicable):

All criteria were within method requirements with any exceptions noted below.

Continuing Calibration:

All criteria were within method requirements with any exceptions noted below.

Surrogates:

All surrogates were within QC limits with any exceptions noted below.

QC Batch: OEXT/1234

S0: Surrogate recovery outside laboratory control limits.

- RB-EAST (Lab ID: 402162001)

- Decachlorobiphenyl (S)

Method Blank:

All analytes were below the report limit in the method blank with any exceptions noted below.

Laboratory Control Spike:

All laboratory control spike compounds were within QC limits with any exceptions noted below.

Matrix Spikes:

All percent recoveries and relative percent differences (RPDs) were within acceptance criteria with any exceptions noted below.

Duplicate Sample:

All duplicate sample results were within method acceptance criteria with any exceptions noted below.

Additional Comments:

QUALIFIERS

Project: 5130.04 PLAINWELL MILL BANKS

Pace Project No.: 402162

DEFINITIONS

DF - Dilution Factor, if reported, represents the factor applied to the reported data due to changes in sample preparation, dilution of the sample aliquot, or moisture content.

ND - Not Detected at or above adjusted reporting limit.

J - Estimated concentration above the adjusted method detection limit and below the adjusted reporting limit.

MDL - Adjusted Method Detection Limit.

S - Surrogate

1,2-Diphenylhydrazine (8270 listed analyte) decomposes to Azobenzene.

Consistent with EPA guidelines, unrounded data are displayed and have been used to calculate % recovery and RPD values.

LCS(D) - Laboratory Control Sample (Duplicate)

MS(D) - Matrix Spike (Duplicate)

DUP - Sample Duplicate

RPD - Relative Percent Difference

NC - Not Calculable.

Pace Analytical is NELAP accredited. Contact your Pace PM for the current list of accredited analytes.

ANALYTE QUALIFIERS

S0 Surrogate recovery outside laboratory control limits.
